[57] **ABSTRACT**

PURPOSE: To obtain excellent mold releasing, non-transfer and easy adhesive properties by coating one side surface of a polyester film with aqueous solution of composition containing a specific amount of silane coupling agent having a high molecular weight represented by a formula and a specific resin amount selected from specific resins.

CONSTITUTION: The laminated film comprises a layer formed by coating one side surface of a polyester film with aqueous solution containing composition which contains 5-95wt.% of silane coupling agent having high molecular weight and represented by a formula (where X: alkoxy group, Y: organic functional group, Z: one type of group selected from a group consisting of alkyl, aryl, aralkyl, alicyclic and polymer chain groups, n, m: 1-90, n+m: 2-90, and n+m+p: 60-100), and 95-5wt.% of one type of resin of polyester, acrylic resin, polyurethane, acrylic modified polyester, acrylic silicone resin, epoxy resin, phenoxy resin, copolymerized vinyl resin, silicone resin, its modified resin, cellulose resin, polyvinyl alcohol, its modified resin, polyvinylbutyral, polyvinyl pyrrolidone, its modified one.
